

Figure S1. Construction of the plasmid recombinant pcDNA 3.1 inserted with spike full SARS-CoV-2 (pcDNA 3.1-spike full SARS-CoV-2)

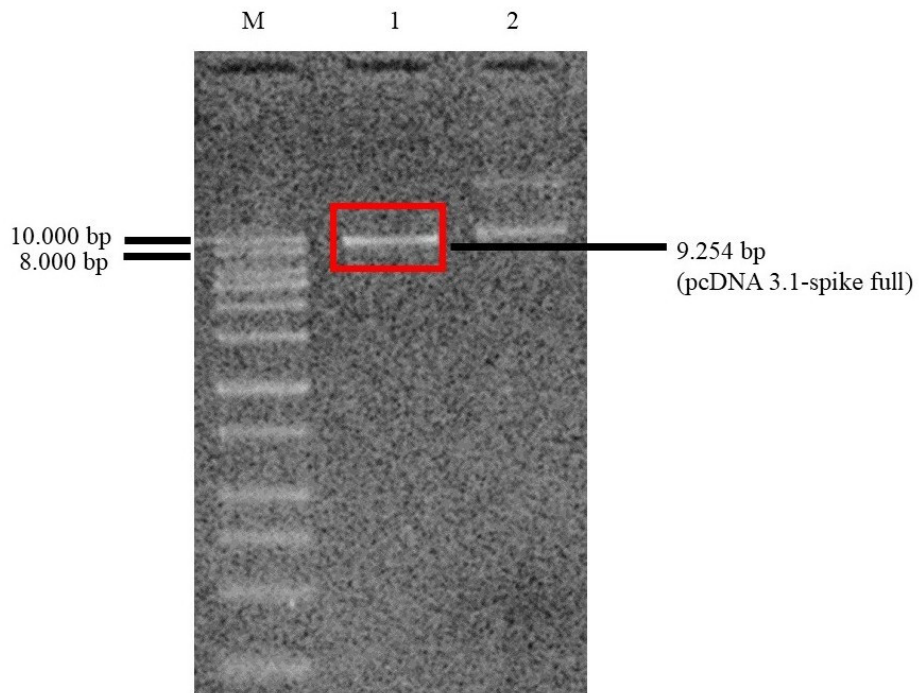

Figure S2. Successful construction of the recombinant plasmid pcDNA 3.1-spike full SARS-CoV-2 was confirmed by double digestion with restriction enzymes XhoI and XbaI. A 10-kb DNA marker (M) was used, yielding a single band after digestion (1). The DNA control showed a double band before digestion (2)
